asian equity markets have grown significantly in size since the early 1990s driven by strong international investor inflows growing regional financial integration capital account liberalization and structural improvements to markets the development of equity markets provides a more diversified set of channels for financial intermediation to support growth thus bolstering medium term financial stability at the same time as highlighted by the may june 2006 market corrections the increasing role of stock markets potentially changes the nature of macroeconomic and financial stability risks as well as the policy requirements for dealing with these risks

asia s financial systems proved resilient to the shocks from the global financial crisis and growth since then has been strong but new challenges have emerged in the region s economies including demographics and aging the need to diversify from bank dominated systems urbanization and infrastructure and the rebalancing of economic activity this book takes stock of the challenges facing the region today and how economic systems in asia s advanced and emerging market economies compare with the rest of the world

this insightful book examines the impact of two competing visions of asian pacific economic growth paths and development governance it discusses law development and finance in the context of the indo pacific strategy versus the belt and road initiative bri whilst also comparing parallel development financing systems

stock markets play a key role in corporate financing in asia however despite their increasing importance in terms of size and cross border investment activity the region s markets are reputed to be more idiosyncratic and less reliant on economic and corporate fundamentals in their pricing using a model that draws on international asset pricing and economic theory as well as accounting literature we find evidence of greater idiosyncratic influences in the pricing of asia s stock markets compared to their g 7 counterparts beyond the identified systematic factors and local fundamentals we also show proof of a significant relationship between the strength of implementation of securities regulations and the noise in stock pricing which suggests that improvements in the regulation of securities markets in asia could enhance the role of stock markets as stable and reliable sources of financing into the future

this study examines major challenges and issues associated with developing regional infrastructure through the fostering of regional cooperation in asia and provides a framework for pan asian infrastructure cooperation the study s long term vision is the creation of a seamless asia an integrated region connected by world class environmentally friendly infrastructure in terms of both hard physical and soft facilitating infrastructure the soft part supports the development and operation of the hard component findings indicate that the benefits of upgrading and extending asia s infrastructure networks are substantial and that all countries in the region would benefit a logistics network is only as good as its weakest link each country in a regional supply chain gains from infrastructure improvements made in others improving connectivity in the region would bring asia large welfare gains through increased market access reduced trade

costs and more efficient energy production and use according to the study to achieve this asia needs to invest approximately 8 trillion in overall national infrastructure between 2010 and 2020 in addition asia needs to spend approximately 290 billion on specific regional infrastructure projects in transport and energy that are already in the pipeline
