named `routing.py` within your project's `asgi.py` directory. Define your routing configuration in `routing.py` python from `channels.auth` import `AuthMiddlewareStack` from `channels.routing` import `ProtocolTypeRouter` `URLRouter` import `chat.routing` `application` `ProtocolTypeRouter` `http` `get_asgi_application` `websocket` `AuthMiddlewareStack` `URLRouter` `chat.routing.websocket.urlpatterns`. In your `asgi.py` file import your `routing.py` and instantiate the application object python import `os` import `django` from `channels.routing` import `get_default_application` `os.environ.setdefault('DJANGO_SETTINGS_MODULE', your_project_name.settings)` `django.setup()` `application = get_default_application()`

### 3 Defining Consumers

Consumers handle realtime events in Django Channels. Create a `consumers.py` file within your `apps` directory. Define a basic consumer class that inherits from `AsyncConsumer` python from `channels.generic.websocket` import `AsyncWebSocketConsumer` class `ChatConsumer(AsyncWebSocketConsumer)` `async` def `connect(self)` `await self.accept(5)` `await self.channel_layer.group_add('chat', self.channel_name)` `async` def `disconnect(self)` `code` `await self.channel_layer.group_discard('chat', self.channel_name)` `async` def `receive(self, text_data=None, bytes_data=None)` if `text_data` `await self.send(text_data=event_message)`

### 4 Routing to Consumers

In your `apps` `routing.py` define the routes for your consumers python from `django.urls` import `path` from `import consumers` `websocket.urlpatterns` `paths` `chat` `consumers.ChatConsumer` `asgi`

### 5 Building a Simple Chat Application Frontend

#### HTML/JavaScript

Create a simple HTML page with a text input field and a button for sending messages. Include JavaScript code to establish a websocket connection to your server and handle sending and receiving messages.

#### Backend Django Channels

Your Django Channels consumers will receive messages from the frontend, send them to the chat group, and broadcast updates to all connected clients.

### 6 Deployment

Deploy your application using ASGI servers like Daphne or Uvicorn.

### 6 Configure your web server

eg Nginx to proxy requests to your ASGI server.

### Concluding Thoughts

Django Channels opens a new world of possibilities for building interactive and realtime web applications. By following the steps outlined in this blog post, you can get started with Django Channels and leverage its powerful features to create engaging experiences for your users. Remember to always consider the ethical implications of your applications and build them responsibly, ensuring privacy, security, accessibility, and responsible social impact.
