this comprehensive book written in an easy to understand language covers the entire syllabus of teaching of biological sciences in particular and science teaching in general in so doing it takes into account the needs of teacher trainees and in service teachers

this book develops a philosophical account that reveals the major characteristics that make an explanation in the life sciences reductive and distinguish them from non reductive explanations understanding what reductive explanations are enables one to assess the conditions under which reductive explanations are adequate and thus enhances debates about explanatory reductionism the account of reductive explanation presented in this book has three major characteristics first it emerges from a critical reconstruction of the explanatory practice of the life sciences itself second the account is monistic since it specifies one set of criteria that apply to explanations in the life sciences in general finally the account is ontic in that it traces the reductivity of an explanation back to certain relations that exist between objects in the world such as part whole relations and level relations rather than to the logical relations between sentences beginning with a disclosure of the meta philosophical assumptions that underlie the author's analysis of reductive explanation the book leads into the debate about reductionism in the philosophy of biology and continues with a discussion on the two perspectives on explanatory reduction that have been proposed in the philosophy of biology so far the author scrutinizes how the issue of reduction becomes entangled with explanation and analyzes two concepts the concept of a biological part and the concept of a level of organization the results of these five chapters constitute the ground on which the author bases her final chapter developing her ontic account of reductive explanation

for many years the use of chemical agents such as pesticides and herbicides has been effective in controlling the many varieties of pests that infest both agricultural crops and backyard gardens however these pests are gradually becoming resistant to these agents because the agents themselves are acting as selective factors making the pests better and better able to resist and persist as a result the use of biological controlling agents is increasing this book is a comprehensive and authoritative handbook of biological control
