A Rapid Response Team (RRT) is a specialized group of healthcare professionals trained to intervene quickly when a hospitalized patient shows signs of clinical deterioration. The primary goal of the RRT is to prevent adverse events such as cardiac arrests, respiratory failures, or unplanned ICU admissions by providing immediate, expert assessment and intervention. Typically, an RRT includes members from various disciplines—such as critical care nurses, respiratory therapists, physicians, and sometimes pharmacists—working collaboratively to stabilize patients and determine the need for further intensive care. Why Is RRT Critical? The implementation of RRTs has been driven by extensive research indicating that early intervention can significantly reduce patient morbidity and mortality.
