the purpose of the thesis is to assess the contribution of the experimental analysis of behaviour eab which is closely associated with the work of b f skinner to the development of consumer psychology an applied subdiscipline which is currently dominated by cognitive models of choice chapter 1 argues that the predominance of the cognitive model impedes the scientific progress of the psychology of consumer behaviour by inhibiting the development of alternative models a proliferation of competing explanations is advocated for the clash of explanations which feyerabend argues is a prerequisite of such progress the eab is advanced as a vehicle for the erosion of the dominating paradigm it not only draws attention to the neglected environmental determinants of behaviour but also provides a philosophical standpoint from which to conduct a critique of the prevailing cognitivism the eab is described in detail in chapter 2 its philosophical foundation is examined in terms of the radical epiphenomenalism upon which its mode of explanation rests and an account of operant conditioning demonstrates the empirical basis of the paradigm skinner s ontological redefinition of behavioural science is outlined through a comparison of classical and operant conditioning the critical significance of the eab for consumer psychology is explained in chapter 3 attention is drawn to the eab s emphasis on the critical evaluation of theoretical terms unobservables alternative sources of explanation derived from a behaviourist perspective on choice are presented and the more direct route to knowledge provided by a theoretically based experimental method is discussed the eab is itself subjected to criticism in chapter 4 which examines its limited capacity to explain human behaviour in complex social situations the verbal control of behaviour the dualistic function of reinforcement informational and hedonic and the disparity between the closed setting of the operant chamber and the relatively open settings in which purchase and consumption occur are noted as undermining radical behaviourism s claim to embody a comprehensive explanation of

behaviour chapter 5 is concerned with the development and evaluation of a model of consumer behaviour derived from the eab as reconstructed after the critical examination pursued in chapter 4 the behavioural perspective model seeks to explain patterns of purchase and consumption by the relative openness of the settings in which they take place and the patterns of reinforcement which apparently control them the model s contribution to consumer psychology is discussed In terms of the relevance of its variables to the outcomes of published behaviour modification experiments concerned with environmental conservation chapter 6 summarises the argument and its implications

academic paper from the year 2017 in the subject medicine neurology psychiatry addiction grade 2 egerton university language english abstract it appears that the field of psychology is becoming extremely fascinating day by day owing to the sophistication of newly designed psychology approaches and research advancement it is evidently true that the discipline of psychology has undergone transient evolution since its inception and further developments are inevitable because psychological research is currently widening to incorporate different perspective which were not studied in psychology in the past initially psychology emerged as one of the classical disciplines of science but it has advanced significantly especially after psychologists established the new branch of applied psychology whose application is gaining popularity currently psychology does not only entail the social aspect of the human mind but it also involves biological perspective and this has led to the emergence of biopsychology and cognitive psychology however it is worth noting that there are different approaches of psychology but behaviourist approach seems to explain the interaction of the human mind and the environment therefore this essay will provide a comprehensive description of the behavioural approach and evaluate its strengths and limitations
